# Using OPUS to control Bridges

- On a typical bridge job, NCDOT
  - Sets an azimuth pair ( ▲ ▲ )
  - Uses approximately 6-7 control panels ( ■ )
  - Controls the site with 2 receivers

# TIP: B-9999

Place the Base Station over your first point and begin RTK survey ensuring that you are collecting Raw Data for at least 2 hours (This data will be sent to OPUS). We will now refer to this as OPUS1.

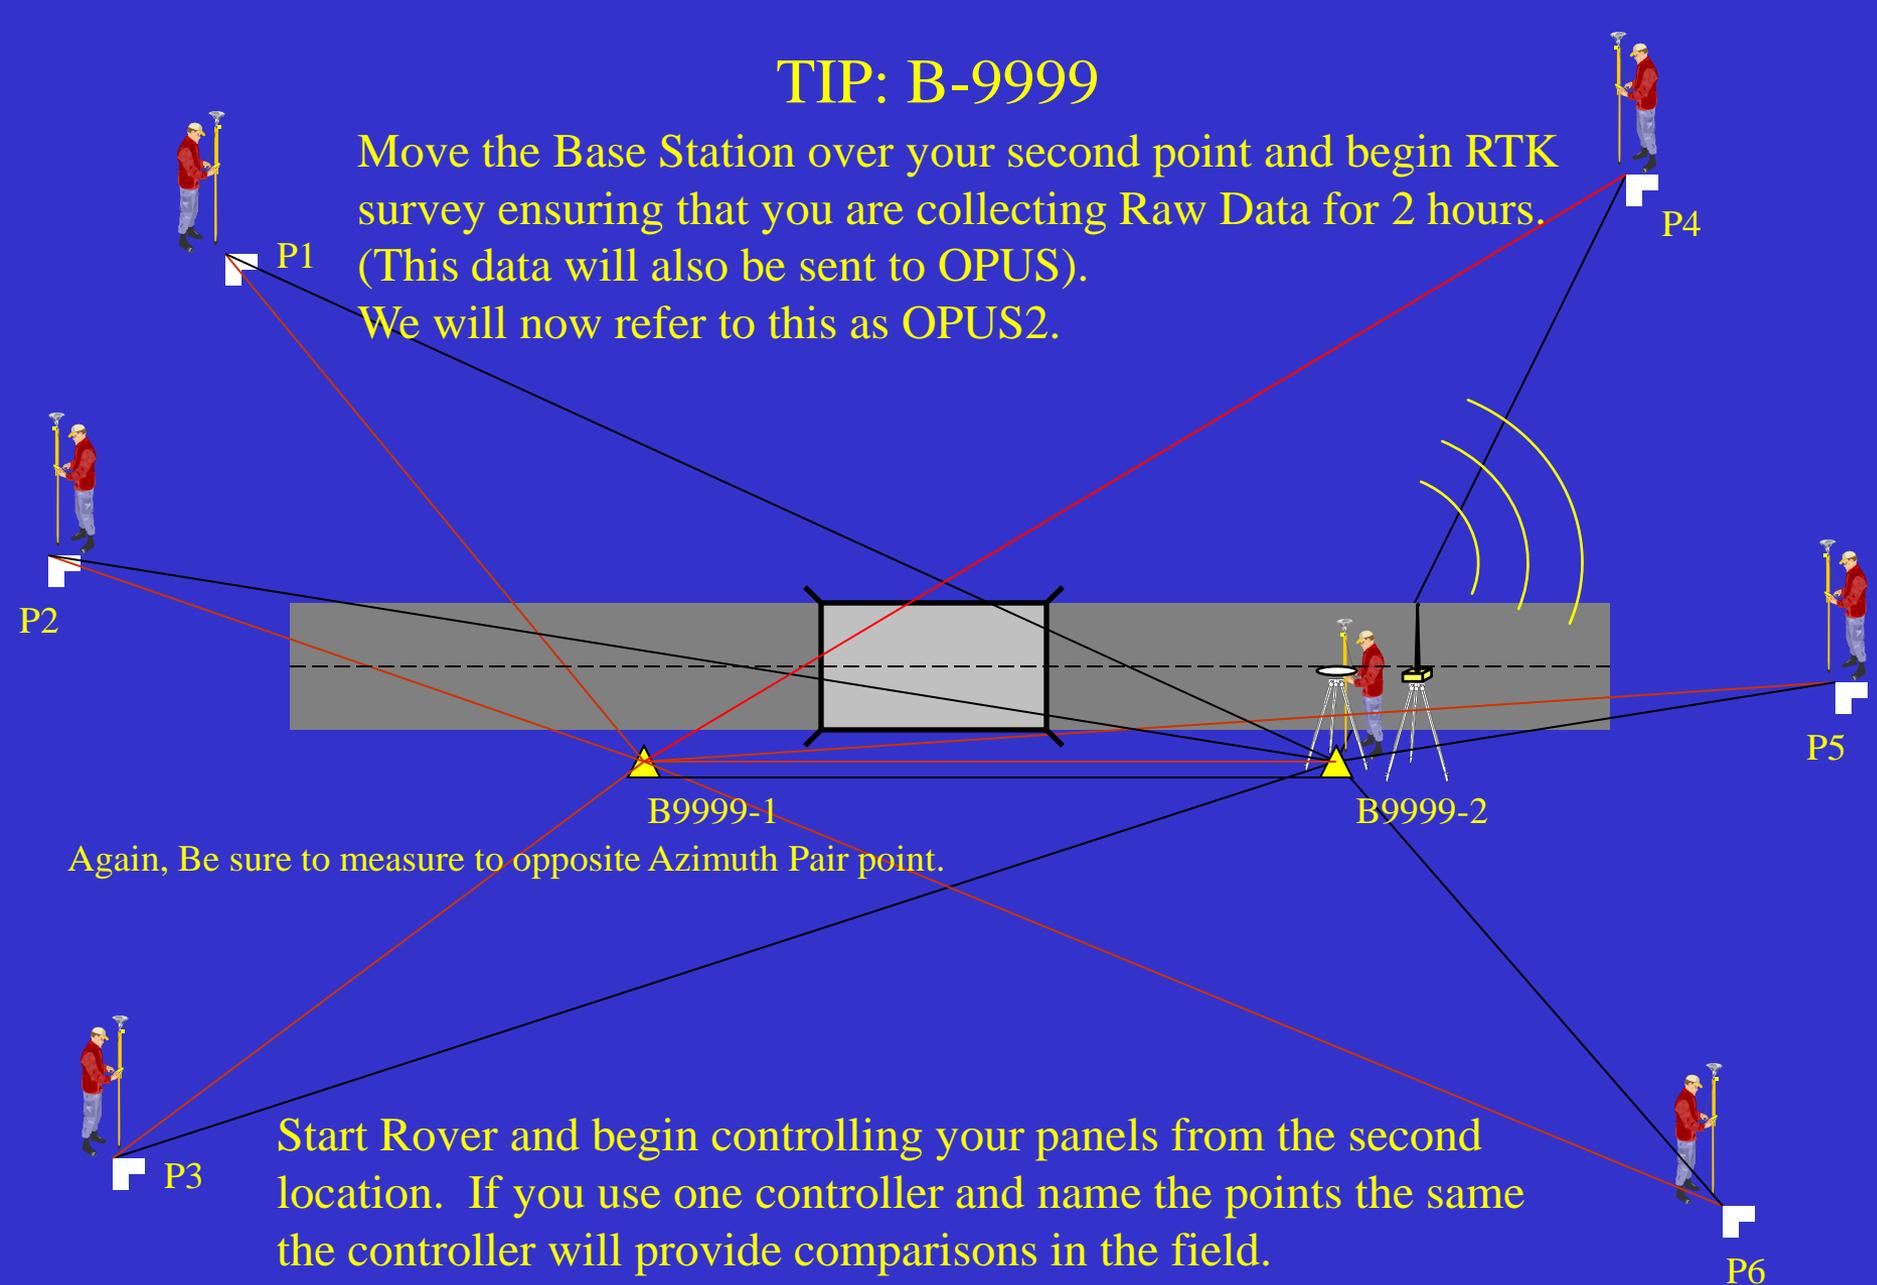

Be sure to measure to opposite Azimuth Pair point.

Start Rover and begin setting and controlling your panels

## TIP: B-9999

Move the Base Station over your second point and begin RTK survey ensuring that you are collecting Raw Data for 2 hours. (This data will also be sent to OPUS). We will now refer to this as OPUS2.

Again, Be sure to measure to opposite Azimuth Pair point.

Start Rover and begin controlling your panels from the second location. If you use one controller and name the points the same the controller will provide comparisons in the field.

# **Field Work is now complete.**

The following steps need to be taken  
to finish the process:

# Office Process

- Download the Raw Data and RTK dc files
- Convert both blocks of raw data to RINEX format using Trimble's utility
- Upload the files to:  
<http://www.ngs.noaa.gov/OPUS/>
- Receive the results from OPUS via email in minutes

# Continued...

- Import the dc file into Trimble Geomatics Office
- Update the initial base position for the first base to the coordinates provided by OPUS1
- After a recompute, everything in the dc file should be corrected relative to the first base location (OPUS1)

# Continued ...

- The position for OPUS2 is only used for comparison to what was derived from OPUS1
- Coordinates can now be utilized as needed

# OPUS & RTK Savings to NCDOT

	<b>Staff Hours</b>	<b>Vehicles</b>	<b>GPS Receivers</b>	<b>Cell Phones</b>
<b>Static</b>	<b>24 - 48</b>	<b>3</b>	<b>3</b>	<b>3</b>
<b>OPUS &amp; RTK</b>	<b>6 - 12</b>	<b>1</b>	<b>1</b>	<b>*1</b>
<b>Savings</b>	<b>18 - 36</b>	<b>2</b>	<b>2</b>	<b>2</b>

\* The cell phone listed in the OPUS & RTK surveying comparison was not used in the survey work, but was available for contacting the office.

# Standards Adopted

Standards endorsed by  
the GICC and have  
become part of the  
Information Resource

Management Commission's  
(IRMC) Technical  
Architecture for  
State Government.

[Version 2.2; Geographic Data Content Standard for Water Distribution and Sanitary Sewer Systems](#); State of North Carolina, Geographic Information Coordinating Council; April 1997. Adopted by the NC GICC on December 4, 1997.

[North Carolina - Statewide Global Positioning System \(GPS\) Data Collection and Documentation Standards, Version 2](#). Adopted by the NC GICC, December 14, 1999.

[Content Standards for Digital Geospatial Metadata, Federal Geographic Data Committee, June 8, 1994](#). Adopted by the NC GICC on February 21, 1996.

[The FGDC Metadata Standard - An Image Map](#)

[Metadata background, updates and tools info.](#)

We recommend using the FGDC's Content Standards for Digital Geospatial Metadata Workbook, Version 1.0. This can be ordered from the FGDC (FREE) by contacting them at P:(703) 648-5514; F: (703) 648-5755; or email [gdc@usgs.gov](mailto:gdc@usgs.gov)
